## Things to know when calculating vour Student-Reported Cumulative Grade Point Average

Your cumulative GPA will not be reported to the members of the Veterinary Admissions Committee. These data are collected for the purposes of statistical reporting and outcomes assessment.

- Calculate a single cumulative GPA to include all letter-graded courses that you completed at accredited community colleges or universities (regardless of date taken).
- Exclude courses taken at vocational institutions.
- Include graduate and professional-level courses.
- Include original and repeated courses if they appear on your transcript (regardless of whether or not the institution calculated the original course in the institutional cumulativeGPA).
- Do not include courses graded as Satisfactory/Unsatisfactory/Pass/Fail. Credits will equal zero.
- Convert the quarter system to a semester system by multiplying course credits by .67 prior to calculating the GPA.
- Convert systems that list courses as one credit to the traditional system (example: "1 credit = 4 semester credits") utilizing the instructions provided on the back of your transcript.
- Account for +/- grades using the Grade Scale chart below.

## Steps to calculate cumulative GPA

1. Convert quarter credits to semester credits by multiplying credits by .67 (Example3).
2. Convert one-semester credit courses to traditional credits as per transcript information (Example 4).
3. For each course, determine the "Grade Points" by multiplying the number of credits by the grade value (see Grade Scale below).
4. Add the "Grade Points" for all courses.
5. Add the total number of credits.
6. Divide the total "Grade Points" by the total number of credits to obtain your cumulative GPA.
7. Our grading scale uses a GPA of 4.0 as the highest score.

## Grade Scale

A $=4.0$
$\mathrm{A}-=3.7$
$\mathrm{B}+=3.3$
$B=3.0$
B- $=2.7$
$\mathrm{C}+=2.3$
$\mathrm{C}=2.0$
C- $=1.7$
D+ = 1.3
$\mathrm{D}=1.0$
D- $=.7$
$\mathrm{F}=0$

## The five examples below show the following instances:

- Example 1: two semesters with a repeat course
- Example 2: three quarters with pass/fail courses
- Example 3: three quarters converted to semesters
- Example 4: two semesters of 1 credit $=4$ credits
- Example 5: combined calculation (semesters and quarters)

## Example 1: two semesters of traditional semester credits with a repeated course grade

NOTE: If you have a combination of semester and quarter credits you must convert your quarter credits to semester credits to correctly calculate your cumulative GPA. Quarter credits can be converted to semester credits by multiplying the credit value for each course by 0.67 .
